

VERTACAT TO INTRODUCE STAND-ON-COMMAND MOBILITY RIDER FOR GOLF COURSES, CLUBS, DRIVING RANGES AT 2025 GCSAA SHOW IN SAN DIEGO

ST. PAUL, MN – January 15, 2025 – VertaCat, creator of the stand-on-command mobility rider for adaptive golfers with lower limb challenges – a technology that is now being used at golf courses across the nation – announced plans to exhibit (Booth #5815) for the first time at the Golf Course Superintendents Association of America (GCSAA) Show in San Diego, CA, February 3-6, 2025.

Golf course owners and managers have recognized the value of offering their club members the use of VertaCat’s stand-on-command golf technology, a product that will enable many of the 600,000 disabled golfers across the U.S. to enjoy the benefits of the game they love.

“For golf course operators who want to welcome thousands of golfers back to their courses by leveraging adaptive golf technology, VertaCat is a game changer,” says Jeff Nicholson, Chief Marketing Officer for VertaCat. “We’ve had golfers return to their courses after years away due to mobility issues, saying that the VertaCat literally saved their lives.”

Made in the U.S., VertaCat’s electric stand-up assist system provides padded chest, waist, and knee straps that securely lift you into an upright stance where you can grab a golf club with one or two hands. After consultation with golfers who have disabilities, VertaCat offers a steepness-warning accelerometer, pivot-in-place positioning technology, turf-friendly tires, fold-out arm rests, and anti-jerk acceleration for a smooth ride on the course.

“We’ll keep striving for a world where mobility limitations will not hamper anyone’s freedom to engage in golf or other favorite outdoor activities,” concludes Nicholson. For more information, golf course managers, owners, and superintendents can visit VertaCat’s GCSAA Show Booth #5815 or visit: [VertaCat.com](https://www.vertacat.com).
